

AVM[®]

HANDCRAFTED
HIGH-END AUDIO
SINCE 40 YEARS

Product Overview
2026

Audiophile Masterpieces. Handmade in Germany – since 1986.

For over three decades, AVM has witnessed many changes in technology and ideas within audio design. But among this change and progress, there has remained one constant we are very proud of - our values and visions. It is the signature of our company that we call AVM's DNA.

You may recognize AVM's DNA not only from the outside in a timeless design, which to this day makes each of our devices appear modern and up-to-date. You may also recognize them from the inside – by their perfect craftsmanship and consistently use of high quality and modern components.

With it you can see and hear the results of our own research and development, for which we have received a long list of awards over the years. Countless awards from the German and international press document the top position of AVM as a recognized premium manufacturer in more than 50 countries around the world. Because at all times we had a clear vision of what our customers wanted: audiophile cutting-edge technology. Developed by the best engineers. Perfectly built and assembled in detail loving and masterful craftsmanship. We have always stuck to that to this day. And that's exactly what we're going to do tomorrow. In our tradition and with passion.

And with the promise that we will not change anything in AVM's DNA in the future either.

And yet a lot has evolved. With us and with our products. Some models we have carefully modified and refined over time, others extensively revised and technologically consistently developed further – for even more performance, perfect sound and less energy consumption. At the same time, we are pioneers and invest extensively in the development of new technologies, that of music and a perfect music reproduction, appealing all senses.

Last but not least, we combine the modern with our traditional values with the utmost care. For example, a large number of our models are equipped with the leading AVM X-STREAM Engine® technology, offering you inexhaustible access to a versatile music cataloge in high-resolution sound quality through seamless integration of the music services Spotify Connect, Tidal Connect MAX, Qobuz Connect and more.

We also pay great attention to the highest level of intuitive user guidance - also in our new multi-room solutions.

We also received at any time a clear, straight and, above all, homely design. This is how we ensure that you enjoy each of our devices every moment with all your senses. When you see it, when you touch it. And above all: When you hear it.

Udo Besser – AVM Owner & Managing Director

RC3 PH

CS 8.3 *S*

Ovation CS 8.3 *S*

All-in-one CD receiver · 2 x 550 W · AVM X-STREAM Engine®: Phono MM/MC · HDMI ARC · S-DAC 384 kHz/32 bit · DSD256 slot-in pure CD drive · Class A headphone amplifier · AVAILABLE IN CELLINI, SILVER & BLACK

Ovation S

A completely new generation of the OVATION line combines the latest technological advances with traditional design. The completely redesigned architecture expands functionality with features such as an RCX-controllable phono stage and an HDMI ARC input.

The quantum leap in sound quality is achieved through a new layout in which signal paths and signal routing have been shortened even further compared to previous generations. The design of the OVATION has only been moderately refined, continuing the tradition of the Ovation Line based on excellent workmanship.

S-DAC MODUL

Ideal upgrade for the SD, MP and CS models of the Ovation Line 6.3 and 8.3 with a fantastic sound enhancement - S-DAC MODULE (plus installation)

AS 8.3 S / PAS 8.3 S

AS 8.3 S

Hybrid integrated amplifier with tube preamplifier section X-Stream Engine® · 2x550W · S-DAC · phono MM&MC · HDMI · ARC · ROON ready · BT 5.0

PAS 8.3 S

Tube preamplifier with X-Stream Engine® S-DAC phono MM&MC · XLR/ RCA inputs & outputs · HDMI ARC · ROON ready · BT 5.0 · Incl. RC 5

MP 8.3 S

CD/media player with slot-in pure CD drive AVM · X-STREAM Engine® (MP): Airplay · Tidal Connect MAX · Qobuz Connect · Spotify Connect · Roon Ready · UPnP · Web radio · BT 5.0 · Quad DAC 384kHz/32bit · DSD2566 · digital inputs · Incl. RC 5

SA 6.3

Stereo power amplifier · Class-A/AB MOS-FET high current technology · 2 x 225/335 W (8/4 Ω), 1000 VA toroidal transformer. 3 separate power supplies · Fully balanced & DC-coupled input stages · 2 separately switchable speaker outputs

MA 6.3

Mono power amplifiers · Class A/ B MOS-FET high current technology · Balanced, DC-coupled architecture with over 600 W continuous power · 20 selected output transistors 1000 VA transformer · 200,000 µF filtering

Ovation .3

Ovation Line 8.3 models are equipped with the additional Ovation Tube Line Stage, which is where the charming, breathtaking and enchanting sound of the Ovation.3 models is created.

CD 8.3

CD Player with Slot-In Pure CD Drive · Quad DAC 384kHz/32bit · DSD256 · 6 Digital Inputs · Incl. RC 5

SA 8.3 / MA 8.3

SA stereo power amplifier / MA mono power amplifier 8.3
Reference hybrid power amplifier with Class A A/B MOS-FET high-current technology and tube input stage(s) Balanced DC-coupled power amplifier architecture - 2 x 450W (SA 8.3) 1,250W (MA 8.3)

SA 8.3 CELLINI

SA 8.3 LITE

Single-ended transistor power amplifier with Class A A/B MOS-FET high current technology and 24 selected MOS FETs for over 200W/channel 8 Ohm- XLR & RCA input 1000VA main transformer

PA 8.3

Modular analog preamplifier with optional IN (max. 8) OUT (max. 3) modules of your choice: Line input with tone control · Phono · DAC · BT 5.0 · Tube Out · Solid state output · Fully balanced & DC-coupled signal routing Ball-bearing rotary knobs Minimum configuration 1 x PA input + 1 x output · Incl. RC 5

Condition PC 5.3 / 3.3

Protection from the bad.

PC 5.3

PC 3.3

PC 5.3

PC 3.3

With the PC 3.3 and PC 5.3 power conditioners, we are offering high-end power filter systems for the first time: Mains current filtering and cleaning have been consistently rethought and developed in-house by AVM's most experienced sound engineers. Both low and high-frequency interference is effectively kept away from the audio system and the mutual interference between the precision audio components is effectively prevented by the separate HF filters for each output.
